

COVID-19 Deep Cleaning Service

The Shine Company have received a number of inquiries from customers about what we can do to help, especially as it is likely in the coming weeks that a lot of buildings will either have staff members or visitors bringing **Coronavirus** into them; we can therefore offer a deep cleaning service Commercial Coronavirus Deep Clean.

Our trained cleaning experts carry out Coronavirus decontamination cleaning and sanitation using fogging to destroy all traces of the virus. Areas are deep cleaned by our trained professionals wearing sterile disposable overalls, hats, masks, gloves and protective footwear. After cleaning with sterilising chemicals, the areas are sealed and taped-off.

- Initially cleaning the areas with Sanisafe 4C disinfectant wipes. Which includes all contact points i.e., light switches, banisters, lift buttons, public seating and washrooms after the initial wiping down of the contact point areas.
- We would also spray the areas using a fogging machine to disperse the chemical to eliminate any further bacteria – this machine is a post cleaner sanitizer that kills all known viruses and bacteria.

We have access to fogging machines, throughout our South Coast operation centres as part of our Coronavirus deep cleaning plan.

We are experiencing a high demand over the UK for this service and whilst we appreciate the difficulty everybody is experiencing at this time, we are doing our utmost to ensure that we can continue to deliver this service to clients. Our service is discrete and can be carried out of hours.

Please feel free to get in contact at **www.theshinecompany.co.uk** to discuss your requirements and get a competitive quote.
